Lat'Anna Davis and Stephanie Kern-Allely

Question: What is the association between trust that the government is honest with the public and trust that the government can protect the public from terrorism?

Minimal sufficient adjustment sets for estimating the total effect of Trust that government is honest with public on Trust that government can protect from terrorism:

Age, Belief_of_information_received, Education, Perceived_risk_of_terrorism

Age, Education, Perceived_risk_of_terrorism, Severity_of_future_terrorist_attack

Belief_of_information_received, Education, Income, Perceived risk of terrorism

Education, Income,
Perceived_risk_of_terrorism,
Severity_of_future_terrorist_attack

Proposed model: Trust that government can protect from terrorism = Trust that government is honest with public + Age + Education + Belief_of_information_received + Perceived_risk_of_terrorism
